PROFILE

Application Support and Integration Support specialist with 3+ years of verified experience in customer-facing technical support, VoIP, virtual PBX, CRM integrations, incident diagnostics, ticket triage, remote troubleshooting, and clear escalation to engineering. Combines support experience with QA thinking, AI-assisted workflows, and personal product/game development projects.

CORE SKILLS

- Support & integrations: VoIP, virtual PBX, call routing, IVR, CRM integrations, messengers, websites, third-party API connection scenarios
- Incident diagnostics: reproduce issues, isolate root causes, identify setup mistakes, integration limits, client-side problems, or product defects
- QA mindset: bug reports, checklists, smoke/regression checks, expected vs. actual result, user-flow testing, escalation quality
- Tools: RingMe, Talk-me, Teamly, OTRS, Jira, WebARM, AnyDesk, Git/GitHub, Postman basics, Chrome DevTools
- AI-assisted work: AI prototyping, prompt-driven workflows, AI response review, data validation, testing AI-generated outputs
- Communication: technical writing, customer calls/chats/tickets, onboarding, cross-team communication, English B1 written communication

SELECTED PRODUCT, QA & AI PROJECTS

Confidential Google Play Mobile Game | Independent project with teammate | 2025 - Present

- Building a confidential mobile idle/tycoon game planned for Google Play and RuStore; public details are limited until release.
- Own broad product responsibilities: gameplay ideas, scene structure, progression/economy logic, UI flow, asset preparation, testing, bug fixing, and build checks.
- Create and adapt 3D assets with Meshy, rig/animate models, optimize/compress images through Photoshop, and organize Unity hierarchy to keep the project readable.
- Use AI-assisted workflows with ChatGPT, Claude, Cursor/Codex, Ollama, Qwen/DeepSeek, ComfyUI, Upscayl, and API-connected tools for ideation, prototyping, content, and quality checks.
- Raw prototypes, screenshots, and builds are available on request under confidentiality.

Android Game - Published on RuStore | Personal project

- Built and published a mobile Android game from idea to release using Unity and AI-assisted development workflows.
- Worked on UI generation/adaptation, Photoshop asset preparation, layout sizing, spacing, randomizer behavior, basic gameplay logic, and iterative bug fixes.
- Tested installation, launch, gameplay flow, UI behavior, fixes, and repeated checks on a real Android device after updates.
- Link: RuStore - Mell Clicker

QA Portfolio / GitHub Practice | Personal projects

- Created a public QA portfolio with practice cases, bug-report structure, expected vs. actual result, environment notes, and evidence-oriented writing.
- Practiced exploratory QA, smoke/regression thinking, DevTools Network checks, basic Postman/API tasks, README/TODO notes, and structured project documentation.

PROFESSIONAL EXPERIENCE

Application Support Specialist / Integration Support | Telfin, Telecommunications Company

August 2024 - Present | Saint Petersburg, Russia

- Handle around 30-60 active support interactions during busy shifts across tickets, calls, and chats, balancing response speed with diagnostic quality.
- Configure and test virtual PBX scenarios: call routing, forwarding, IVR, busy/no-answer flows, user accounts, and call handling rules.
- Onboard customers and set up telephony integrations with CRM systems, messengers, websites, and third-party APIs: call logging, customer card creation/update, notifications, and scenario correctness.
- Investigate issues from 'not working' to complex customer requirements: clarify conditions, reproduce behavior, isolate setup mistakes, integration limits, client-side problems, or product defects.
- Found and documented product defects, including double charging in a provider integration flow and delayed Telegram service disconnection where the account card changed but PBX-level service remained active.
- Prepare clear engineering tickets with steps, account/phone number, expected vs. actual result, checked hypotheses, screenshots/context, and proposed workaround when possible.
- Use AnyDesk for remote troubleshooting and help new teammates understand common support workflows and ticket quality standards.

Tools: RingMe, Talk-me, Teamly, OTRS, Telegram, AnyDesk, CRM integrations, virtual PBX

Warehouse Operations Specialist / Handheld Scanner Operator | Sportmaster Russia

May 2024 - July 2024 | Moscow, Russia

- Worked with product labeling and inventory using handheld scanner devices: scanning, data entry, data checks, and transfer control.
- Used WMS to check product locations, record operations, and prepare online orders for shipment.
- Processed 1,000+ items per shift while maintaining speed, accuracy, and teamwork in a high-volume workflow.

Tools: Handheld scanner devices, scanning equipment, WMS

Tier 1 Technical Support Specialist | ER-Telecom Holding

October 2022 - May 2024 | Russia

- Supported customers with internet, telephony, and security systems; ran step-by-step diagnostics and explained solutions in simple language.
- Remotely checked and configured Wi-Fi routers, TV boxes, phone gateways, PCs/laptops, and internet-connected devices.
- Managed tickets in WebARM and Jira: logged issues, selected categories, collected data, and escalated cases without losing context.
- Followed scripts and knowledge-base instructions; helped new teammates understand common cases and write clear tickets.

Tools: WebARM, Jira, internal utilities/emulators

EDUCATION AND LANGUAGES

Gubernsky Pedagogical College, Rossosh Branch - Computer Networks / Computer Equipment Technician, Vocational Secondary Education, 2020.

Languages: Russian - Native; English - Intermediate (B1), comfortable with written communication; spoken communication is developing.
