PROFESSIONAL PROFILE

Technical specialist with 4 years of commercial experience in support and integration operations, growing in AI Product and AI-assisted QA. I use Codex and agent tools daily to build, diagnose, and iteratively improve my own Web, API, and Android projects. I define requirements and prompts, verify generated functionality, find defects, refine tasks, and take results through publication. Released two games in RuStore, built QA API Lab, published QA cases, and worked with Ollama, ComfyUI, and AI agent prototypes.

COMMERCIAL EXPERIENCE

Telphin, telecommunications company

08.2024 - present

Customer Support Specialist, First Line, Senior Grade

- Support B2B clients using cloud PBX, VoIP/SIP, and integrations with amoCRM, Bitrix24, and YCLIENTS; work within SLA.
- Handle about 50 tickets and 20 calls per day; on weekend shifts, also manage up to 20 chats.
- Reproduce incidents, check configuration and environment, and separate configuration errors from device, network, carrier, integration, or service issues.
- Prepare technical tickets for fixes and improvements, provide tested hypotheses and evidence, and perform retests after changes.
- Regularly assist about 6 interns and have received personal positive feedback from clients.

Diagnostic examples:

- Found a double SIP registration conflict on one extension in about 3 minutes, removed the duplicate, and restored the integration.
- For a Huawei device where the official app failed, selected Zoiper, configured the SIP account, and confirmed that calls were restored.
- When calls failed, ruled out PBX settings and isolated carrier-side blocking related to call labelling.

Tools and environment:

Telphin.Office, VoIP/SIP, OTRS, Talk-me, AnyDesk, amoCRM, Bitrix24, YCLIENTS, Zoiper, Windows.

ER-Telecom Holding

10.2022 - 05.2024

First Group Technical Support Specialist

- Handled about 120 calls per shift and up to 200 requests during major incidents.
- Diagnosed internet, IPTV, and telephony issues; configured IP settings, routers, Wi-Fi, IP set-top boxes, and telephone gateways.
- Documented incidents in WebARM and Jira, escalated tasks without losing context, and helped trainees learn standard workflows.

Tools and environment:

WebARM, Jira, network and customer equipment, remote diagnostics.

AI-ASSISTED PROJECTS AND PRODUCT PRACTICE

KoMa Studio Android Games

2025 - present

Concept creator, product owner, AI-assisted developer, QA

- Released two games in RuStore: Russian Checkers and Mellstroy Clicker; a third project is in development.
- Define the concept, mechanics, and acceptance criteria; assign tasks to Codex in natural language and manage generation iterations.
- Review Unity changes, run user scenarios, find defects, specify fixes, and perform retests before release.
- Most code is generated with AI; I remain responsible for requirements, prompts, output verification, change integration, and publication.

Tools and environment: Codex, Unity, Android, Git/GitHub, prompt iteration, acceptance testing.

QA API Lab

2026

Concept and requirements owner, AI-assisted implementation and verification

- Defined the lab purpose, API scenarios, and expected behavior; manually verified responses and refined tasks for Codex.
- The project contains 8 positive, negative, and boundary scenarios, a mini regression, 9 pytest checks, and GitHub Actions.
- Code and automated tests were created with AI; my contribution is task definition, verification, issue discovery, and acceptance.

Tools and environment: FastAPI, Postman, REST, HTTP, JSON, Swagger/ReDoc, GitHub Actions; Pytest - reading and understanding existing tests.

[Open QA API Lab](#)

AI Tools and Local Experiments

2025 - present

Independent practice

- Installed and configured Ollama and ComfyUI, worked with local models, and built AI agent prototypes.
- Use AI for task decomposition, code generation and fixes, error analysis, test-scenario preparation, and documentation.
- Verify results manually and do not treat AI-generated code as correct until it runs and the relevant scenarios pass.

Tools and environment: Ollama, ComfyUI, Codex, AI agents, prompt engineering, local AI workflows.

Public QA Cases

2026

Manual QA, project practice

- Published 6 reproducible defects across Web, accessibility, iOS, and Game QA.
- Each case includes environment, steps, actual and expected results, severity, priority, and available evidence.

Tools and environment: Bug reporting, exploratory testing, functional testing, retest.

SKILLS AND PROFICIENCY

COMMERCIAL	Troubleshooting; B2B support; integration support; VoIP/SIP; CRM; SLA; OTRS/Jira; technical tickets; retest; client communication.
PROJECT	AI-assisted development; Codex; Ollama; ComfyUI; AI agents; prompt iteration; Manual QA; Postman; REST/HTTP/JSON; Git/GitHub; Unity/Android.
BEGINNER	Formal LLM evaluation; Chrome DevTools; SQL/MySQL; independent Pytest; English A2, working toward B1.

EDUCATION AND LANGUAGES

2020. Gubernsky Pedagogical College, Rossosh branch. Computer Networks, Computer Equipment Technician.
Russian - native. English - A2, working toward B1; use English-language interfaces and documentation with translation support.
